How to build your first GitHub App

Wilhelm Klopp

Software Engineer at GitHub

Objectives

- **Understand the basics of GitHub Apps**
 - Receiving webhook events
 - Making API calls
 - Authentication model
- **Where to find documentation**
- **Build a GitHub App, using Probot**
 - Understand the structure of webhook payloads
 - Interact with the Issues API
 - Interact with the Checks API
 - Use webhook redeliveries to debug your GitHub App

The background is a solid orange color. It features several concentric circular lines in shades of orange and yellow, primarily visible on the left and right sides. A small yellow dot is located on the right side, near the bottom.

Demo

**What is a
GitHub App?**

A GitHub App

- is an **actor** independent of any user account
- can be installed on individual repositories or entire orgs
- has a set of permissions (e.g. read access to code, write access to pull requests, etc.)
- receives webhook events from GitHub and acts on those events (by making API calls)

Things a GitHub App can do

**(almost) anything you can
do as a GitHub user, you can
also do with a GitHub App**

Open a new issue

Submit a pull request review

Add a label to a pull request

Move a card on a project board

Comment on an issue

Read Git data

git pull code from a branch

Create a new project board

Lock an issue

Create a pull request

Checks API

developer.github.com/v3/checks

SyntaxErrors ignore startLine option #8

Open

Me1000 opened this issue 23 hours ago · 1 comment

Me1000 commented 23 hours ago • edited ▾

Bug Report

Current Behavior

If a SyntaxError is thrown from @babel/parser, startLine is ignored (it uses the "real" start line).

Input Code

<https://runkit.com/me1000/5c06f31db95038001226cd38>

RunKit Notebook

Remove

[Babel Issue 9015 - SyntaxErrors ignore startLine option](#)

```
const { parse } = require("@babel/parser");  
  
parse("5+", { startLine: 10 });
```

SyntaxError

Stack Trace Viewer ▾

SyntaxError: Unexpected token (1:2)

at Parser.raise in [@babel/parser/lib/index.js](#) ▾ — line 4021

**GitHub App or
GitHub Action?**

GitHub App	GitHub Action
Generally available	Limited public beta
Hosted by you	Hosted by GitHub
Can receive multiple webhook events	Part of a `workflow` that runs when one specific `event` happens
Great if you need to persist data	Great for completely stateless workflows
	Great if you want to run git commands against your repo
If you ever need to act on behalf of a user, you can (GitHub Apps offer OAuth)	No support for acting on behalf of users
Once created, very easy to install on other repositories and organisations.	Some setup required in each new repository

Glitch

Let's get started

**GITHUB.COM/SATELLITEWORKSHOPS/
GITHUB-APPS**

Extend your app further

- Support multiple changing dependencies in a single pull request
- Show license information as part of the annotation
- Customise warning/notices
- Add an “action button” to let the legal team “approve” the dependency changes
- Modify the check “conclusion” based on the changed dependencies
- Experiment further with all the other APIs and build something completely different

The background is a dark navy blue. It features several concentric circular lines in a light blue-grey color. A single, solid yellow line forms a circle that is slightly offset from the center. A small yellow dot is positioned on the right side of the image, near the bottom of the yellow circle.
